

VIA-CHEM VIA-BOND

Cyanoacrylate Super Glue, Epoxies, Adhesives, Cements, Hooks & Klips

EPOXY ADHESIVE

Epoxy is an extremely strong adhesive that is formed from a reaction of Epoxide Resin (A) and Polyamine Hardener (B). Epoxies are used in a wide range of adhesive applications where long term strength and durability is needed. Epoxies bond wood, metal, glass, stone, plastic and concrete.

Epoxy Adhesives differ in terms of curing times. Some applications require longer set times. Most Epoxies when fully cured can be sanded and painted. Via Bond is pleased to offer Epoxies in 28.4 ml & 6 ml pre measured Syringes that dispense equal amounts of Resin and Hardener.

#B-SYQS	28.4 ml Quick Set Syringe
#B-SYSS	28.4 ml Slower Set Syringe
#B-SYEM	28.4 ml Metal Grade Syringe
#MINI-QS	6 ml Single Use Quick Set Syringe
